COMPANY PROFILE

O7 Services IT Company

About

ISO 9001:2015 Certified.

Specializations

- Web & Mobile Development
- Software Development
- Digital Marketing
- IT Integration

Services

- Consulting & System Development
- Deployment & QA
- 24x7 Support

Locations

Headquarters: Jalandhar
Branch Office: Hoshiarpur

INTRODUCTION

Amazon Sales Analysis is a data analysis project that examines Amazon sales data to understand sales performance, order status, product categories, and customer trends.

The project uses **Python, Pandas, Matplotlib, and Jupyter Notebook** to analyze the data and generate useful business insights through visualizations.

Python

Pandas

Matplotlib

Jupyter
Notebook

OBJECTIVE

Analyze Amazon sales data.

Identify sales trends and patterns.

Compare product category performance.

Track order and shipment status.

Identify top-selling products and categories.

STEPS INVOLVED

1 Idea

Define the problem and decide what to analyze.

2 Dataset

Collect Amazon sales data from reliable sources.

3 Reason

Identify the purpose and the insights to gain from the data.

4 Data cleaning and preprocessing

Handle missing values, remove duplicates and prepare data for analysis.

5 Data visualization

Create charts and graphs to represent data in a visual way.

6 Data analysis

Analyze the data to find trends, patterns and draw meaningful conclusions.

ADVANTAGE

Provides clear insights
into sales performance.

Helps identify top-selling
products and categories.

Improves business
decision-making using data.

Tracks order and shipment
status effectively.

Saves time through
automated data analysis
and visualization.

Supports better inventory
and sales planning.

TECHNOLOGIES USED

PYTHON

- Used for data collection, cleaning, analysis, and automation.

PANDAS

- Used for data manipulation, cleaning, and structured analysis.

NUMPY

- Used for numerical operations and handling large datasets efficiently.

MATPLOTLIB

- Used for creating static, interactive, and customizable visualizations.

SEABORN

- Used for advanced statistical visualizations and attractive charts.

MYSQL

- Used for storing and managing sales and product data.

STREAMLIT

- Used for building interactive web applications and dashboards.

```
<class 'pandas.DataFrame'>
```

```
Index: 128808 entries, 0 to 128975
```

```

CONCLUSION

The Amazon Sales Analysis project successfully analyzed sales data to identify trends, product performance, and order status. Using Python and data visualization, meaningful insights were generated that can help improve business decisions, increase sales performance, and enhance customer satisfaction.

FUTURE WORK

Develop a real-time interactive dashboard.

Use machine learning for sales forecasting.

Perform customer segmentation for targeted marketing.

Add region-wise and seasonal sales analysis.

Build a product recommendation system.

Integrate live Amazon sales data for continuous analysis.

THANK YOU
